ASSET Voyages demos prepared by ProdCraft

Two working demos. Try both, choose one.

Same requirements, fictional data and codes, sandboxes that reset themselves.

1 Two options, both working

You asked to see how we would handle congresses, flight enquiries and GM&E codes. Rather than describe it, we built it twice, so you can try it yourselves and pick the option that suits ASSET.

Both demos are built to the same five requirements from your consultation. Every congress, person, enquiry and code in them is **fictional**. Each demo is a **sandbox**, a safe practice copy: it resets on its own, so nothing you click can break anything.

Option A

A

WordPress

The system your current site already runs on, with a plugin we wrote for ASSET. It runs inside **WordPress Playground**: a complete WordPress that runs entirely in your browser, with nothing to install.

The first start takes about 20 to 40 seconds while it loads. Later starts are quicker.

Open the visitor site (https://playground.wordpress.net/?mode=seamless&login=no&blueprint-url=https://asset-voyages-redesign.pages.dev/demo-wordpress/blueprint-visitor.json)

Open the admin, signed in (https://playground.wordpress.net/?mode=seamless&blueprint-url=https://asset-voyages-redesign.pages.dev/demo-wordpress/blueprint-admin.json)

The admin link signs you in automatically as « direction ». To follow one enquiry from start to finish, use the visitor site and its « Espace équipe » link: each link opens its own separate copy.

Option B

B

Our custom platform

The Console from our earlier concept, made real. Public pages for your visitors, a small console for your team, and a database behind them, running on **Cloudflare**, a global network that serves websites.

Opens straight away in your browser, with nothing to install.

Open the visitor site (https://asset-voyages-demo.debanjan186.workers.dev/)

Open the team console (https://asset-voyages-demo.debanjan186.workers.dev/console)

The console asks you to sign in with one of the logins below.

Demo logins, the same for both options

Password for every user: `demo-asset`

`direction` management: approves access to codes and publishes congresses

`equipe` the team: handles flight enquiries

`contributeur` adds and edits congresses, which then wait for review

2 Try it in five minutes

Your five requirements, one task each. Each task shows where to click in Option A and in Option B. Tasks 3 and 4 follow on from each other: send an enquiry as a visitor, then find it as the team.

Task 1

Create or edit a congress

Your team, in the admin

Option A: WordPress

1. Open the admin (https://playground.wordpress.net/?mode=seamless&blueprint-url=https://asset-voyages-redesign.pages.dev/demo-wordpress/blueprint-admin.json). You are already signed in.
2. In the left-hand menu, choose « Congrès », then « Ajouter un congrès ».
3. Fill in the name, dates, city and discipline, then publish. To change one, open it from « Tous les congrès ».

Sign in as `contributeur` instead and your congress waits for review before it goes live.

Option B: custom platform

1. Open the team console (https://asset-voyages-demo.debanjan186.workers.dev/console) and sign in as `contributeur` .
2. Open the list of congresses and add a new one, or open an existing one to change it.
3. Send it for review. Sign in as `direction` to check it and publish it.

Task 2

Find a congress in the public catalogue

Your visitors, on the public site

Option A: WordPress

1. Open the visitor site (https://playground.wordpress.net/?mode=seamless&login=no&blueprint-url=https://asset-voyages-redesign.pages.dev/demo-wordpress/blueprint-visitor.json) and go to the congress catalogue.
2. Type a word in the search box, or narrow the list by discipline, country or month.
3. Open a congress to see its details page: dates, city, venue and discipline.

Option B: custom platform

1. Open the visitor site (https://asset-voyages-demo.debanjan186.workers.dev/) and go to the congress catalogue.
2. Type a word in the search box, or narrow the list by discipline, country or month.
3. Open a congress to see its details page: dates, city, venue and discipline.

Task 3

Send a flight enquiry

Your visitors, on the public site

Option A: WordPress

1. On a congress details page, find « Demander un devis vol ».
2. Enter your contact details, departure city, travel dates and number of passengers.
3. Send it. You receive a reference number on screen.

Try leaving a field empty, or a return date before the outward date: the form says what to correct.

Option B: custom platform

1. On a congress details page, open the flight enquiry form.
2. Enter your contact details, departure city, travel dates and number of passengers.
3. Send it. You receive a reference number on screen.

The same checks apply: the form says what to correct before anything is sent.

Task 4

Receive, view, track and update enquiries

Your team, in the admin

Option A: WordPress

1. In the same tab as task 3, click « Espace équipe » and sign in as `equipe` . Open « Demandes »: your enquiry is at the top.
2. Open it and change its status, for example from « Nouvelle » to « Qualifiée ». Each change is kept in its history.
3. Export the list as a spreadsheet file (CSV). « Journal des notifications » shows the message your team would have received.

Option B: custom platform

1. Open the team console (https://asset-voyages-demo.debanjan186.workers.dev/console), sign in as `equipe` and open the enquiries.
2. Open your enquiry from task 3 and change its status. Each change is kept in its history.
3. Export the list as a spreadsheet file (CSV), and see the log of notifications your team would have received.

Task 5

Protect the GM&E codes

Your team and management

> GM&E codes are the Air France-KLM Global Meetings & Events fare codes for a congress. Your team sees them hidden and asks for access, giving a reason. Direction approves for 24 hours, or refuses. Each time a code is shown, it is recorded. Visitors never see a code, only a line saying that a negotiated congress fare is available.

Option A: WordPress

1. Signed in as `equipe` , open « Accès GM&E »: the codes are hidden. Ask for access and give a reason.
2. Sign out, sign in as `direction` , and approve for 24 hours or refuse.
3. Sign in as `equipe` again: the code is shown, and the access record lists it.

Option B: custom platform

1. In the team console, sign in as `equipe` and open « Codes GM&E »: the codes are hidden. Ask for access and give a reason.
2. Sign out, sign in as `direction` , and approve for 24 hours or refuse.
3. Sign in as `equipe` again: the code is shown, and the access record lists it.

Prefer to watch first?

Two short recordings walk through the same five tasks, one per option.

Option B, our custom platform: the five tasks from start to finish.

3 What works today, and what we would build

"Works in the demo" means you can try it now. "Built during the project" means it is part of the work after approval; where it helps, the demo shows a stand-in.

1. Create and edit congresses

Option A

Works in the demo

In the standard WordPress editor, with review before publishing.

Option B

Works in the demo

In the team console, with review before publishing.

2. Public catalogue with search, filters and details page

Option A

Works in the demo

Search, filters by discipline, country and month, a page per congress.

Option B

Works in the demo

Search, filters by discipline, country and month, a page per congress.

3. Flight enquiry form

Option A

Works in the demo

Every field is checked before sending; you get a reference.

Option B

Works in the demo

Every field is checked before sending; you get a reference.

4. Receive, view, track and update enquiries

Option A

Works in the demo

Statuses, history of changes, export to a spreadsheet (CSV).

Option B

Works in the demo

Statuses, history of changes, export to a spreadsheet (CSV).

5. GM&E codes protected

Option A

Works in the demo

Codes hidden, access asked with a reason, 24-hour approval, a record of every display.

Option B

Works in the demo

Codes hidden, access asked with a reason, 24-hour approval, a record of every display.

Email notifications

Option A

Built during the project

The demo shows a log of the messages instead of sending them.

Option B

Built during the project

The demo shows a log of the messages instead of sending them.

Importing about 300 congresses from a spreadsheet

Option A

Built during the project

With duplicate checks, and a trial run first.

Option B

Built during the project

With duplicate checks, and a trial run first.

English version
Option A **Built during the project** Pages and congresses in English alongside French. **Option B** **Built during the project** Pages and congresses in English alongside French.
Two-step login for staff
Option A **Built during the project** A password plus a second check, for every staff account. **Option B** **Built during the project** Staff sign in with a code sent to their email.
Backups and restore
Option A **Built during the project** Regular backups, and a tested way to restore them. **Option B** **Built during the project** Regular backups, and a tested way to restore them.

Editing all the site's pages

Option A

Works in the demo

The standard WordPress page editor; your current pages are moved over during the project.

Option B

Built during the project

A page editor added to the team console.

For both options, hosting in ASSET's name is set up during the project.

Works in the Option B demo | Suggestion only

One more idea: a link for group trips

For a group going to a congress, each traveller's details often arrive by e-mail and are copied into a spreadsheet by hand.

What it does

1 **Your team sends one link**

for the enquiry, in its reply to the client.

2 **Each traveller fills in their own details**

on a phone: name

as on the ID document, e-mail, departure city and dates.

---

3 Your team sees the list fill in

, with a « répondus / attendus » counter and a ready-to-use export, « Exporter pour cotation (CSV) ».

How to try it

1. Open enquiry DV-2026-0001 (https://asset-voyages-demo.debanjan186.workers.dev/console/demandes/1) and sign in as `equipe` , password `demo-asset` .
2. Choose the « Groupe » tab. Three fictional travellers have already answered.
3. Under « Lien de groupe », copy the link and open it in another tab. This is the traveller’s page.
4. Send an answer, then go back to the « Groupe » tab: it is in the list.

The traveller’s page never shows the other travellers, codes or fares.

Where it stands

- Working in Option B’s demonstration, with fictional travellers.
- **Suggestion only. It is not part of the quotation and changes nothing in the scope or budget.**
- In WordPress, it would be built as part of the project, if you choose it.

Honest limits of the demo

- A traveller who changes phone cannot correct their entry directly: the change waits for your team to accept it. Production would add an e-mail confirmation step.
- Anyone the link is forwarded to can answer. Revoking it stops that at once.
- Reminders by e-mail and a status per traveller come in production.

4 How each one is built, in plain words

Option A: WordPress

- WordPress, the system your current site already runs on.
- Our own plugin (an add-on to WordPress), with no page builders and no paid plugins.
- Your team edits in the standard WordPress editor.
- Hosted with a European WordPress host, in ASSET’s name.
- Needs regular updates of WordPress and its plugins.

Option B: our custom platform

- The public pages are prepared in advance and served from Cloudflare's global network.
- A small console for your team.
- The database is kept in the European Union.
- Staff sign in with a code sent to their email.
- No plugins to update; the codes are kept in a separate, locked table.

How to choose

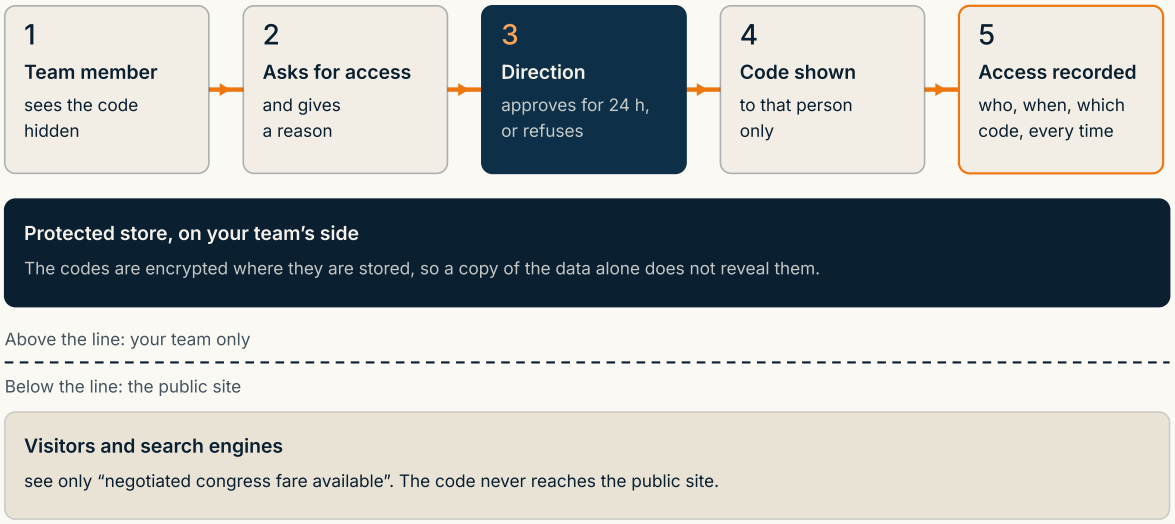

Choose A if a familiar editor and the widest choice of future developers matter most.

Choose B if the least upkeep and security designed in from the start matter most.

With either one: the source code, the data and every account are in ASSET's name; you can export everything; and you receive documentation.

5 How the GM&E codes stay protected

The same path in both options. Only a named team member, with Direction's approval, ever sees a code, and only for 24 hours.

Every request, decision and display is kept in a record that Direction can read.

6 Milestones

Counted from your approval and receipt of the required content. The plan is the same for both options.

Week 1 | Week 10

Kickoff, access and audit

Weeks 1 to 2

An audit of your current site, and one workshop of up to 2 hours.

Design

Weeks 2 to 5

Wireframes (page outlines), then desktop and mobile mock-ups, with two rounds of changes at each stage.

Development

Weeks 5 to 10

Pages, the congress catalogue, enquiries, GM&E access, and the import of your congress list, with a trial run first.

Testing

Weeks 10 to 12

On a private copy of the site, against your acceptance tests T01 to T15, then fixes.

Training

Week 12

For your team, with a second session four weeks after launch.

Launch

Week 13

After your written acceptance and management's go-ahead, with old addresses redirected to the new pages.

Stabilisation

Four weeks after launch

We watch the new site closely and fix anything that comes up.

If the year-end holidays fall inside the plan, those weeks are added. The launch date is agreed together.

7 A 20 to 30 minute demonstration

We walk you through both options and answer your questions. Pick a time below and your email opens with it filled in. All times are Paris time.

Thursday 12 November

10:00 | 14:30

Friday 13 November

10:00

Monday 16 November

10:00 | 14:30

Tuesday 17 November

10:00 | 14:30

Suggest another time

Nothing on this page is chargeable. If you would like a sample built for one of your own congresses, we can do that only if you ask, with the scope, fee and date agreed in writing first.

Debanjan

Founder, ProdCraft

debanjan@prodcraft.fyi

All congresses, people, enquiries and codes in these demos are fictional. The concept and the demos are illustrations: only the signed proposal defines what is included.

Earlier pages: the concept, the note for ASSET (in French), the Console mock-up,

our questions.
