ASSET Voyages demos prepared by ProdCraft

Two working demos. Try both; the proposal covers each.

Same requirements, fictional data and codes, sandboxes that reset themselves.

1 Two options, both working

You asked to see how we would handle congresses, flight enquiries and GM&E codes. Rather than describe it, we show it in both forms, so you can try each one yourselves and pick the option that suits ASSET.

Both demos are built to the same five requirements from your email of 5 November. Every congress, person, enquiry and code in them is **fictional**. Each demo is a **sandbox**, a safe practice copy: it resets on its own, so you can try every task without affecting the demo for anyone else.

Option A

A

WordPress

The system your current site already runs on, with a plugin we wrote for ASSET. It runs inside **WordPress Playground**: a complete WordPress that runs entirely in your browser, with nothing to install.

WordPress starts fresh each time you open one of these links, so nothing from an earlier visit is kept.

Open the visitor site (https://playground.wordpress.net/?mode=seamless&login=no&blueprint-url=https://asset-voyages-redesign.pages.dev/demo-wordpress/blueprint-visitor.json)

Takes about 15 to 25 seconds to start. If it stays on the loading screen, reload the page.

Open the admin, signed in (https://playground.wordpress.net/?mode=seamless&blueprint-url=https://asset-voyages-redesign.pages.dev/demo-wordpress/blueprint-admin.json)

Takes about 15 to 25 seconds to start. If it stays on the loading screen, reload the page.

The admin link signs you in automatically as « direction ». To follow one enquiry from start to finish, use the visitor site and its « Espace équipe » link: each link opens its own separate copy.

Option B

B

Our custom platform

The Console from our earlier concept, made real. Public pages for your visitors, a small console for your team, and a database behind them, running on **Cloudflare**, a global network that serves websites.

Opens straight away in your browser, with nothing to install.

Open the visitor site (https://asset-voyages-demo.debanjan186.workers.dev/)

Open the team console (https://asset-voyages-demo.debanjan186.workers.dev/console)

The console asks you to sign in with one of the logins below.

Demo logins, the same for both options

Password for every user: `demo-asset`

`direction` management: approves access to codes and publishes congresses

`equipe` the team: handles flight enquiries

`contributeur` adds and edits congresses, which then wait for review

In Option B, each person's trial is not shown to other visitors and is removed by the nightly clean-up once it has gone unused for 24 hours. Option A starts fresh each time you open it.

2 Try it yourself

Your five requirements, one task each. Each task shows where to click in Option A and in Option B. Tasks 3 and 4 follow on from each other: send an enquiry as a visitor, then find it as the team.

Task 1

Create or edit a congress

Your team, in the admin

Option A: WordPress

1. Open the admin (https://playground.wordpress.net/?mode=seamless&blueprint-url=https://asset-voyages-redesign.pages.dev/demo-wordpress/blueprint-admin.json). You are already signed in.
2. In the left-hand menu, choose « Congrès », then « Ajouter un congrès ».
3. Fill in the name, dates, city and discipline, then publish. To change one, open it from « Tous les congrès ».

To see the review step, sign out (« Retour au site », then « Se déconnecter »), sign in as `contributeur`, and your congress waits for review before it goes live.

Option B: custom platform

1. Open the team console (https://asset-voyages-demo.debanjan186.workers.dev/console) and sign in as `contributeur`.
2. Open the list of congresses and click « Ajouter un congrès », or open an existing one to change it.
3. Send it for review. Sign in as `direction` to check it and publish it.

Task 2

Find a congress in the public catalogue

Your visitors, on the public site

Option A: WordPress

1. Open the visitor site (https://playground.wordpress.net/?mode=seamless&login=no&blueprint-url=https://asset-voyages-redesign.pages.dev/demo-wordpress/blueprint-visitor.json) and go to the congress catalogue.
2. Type a word in the search box, or narrow the list by discipline, country or month.
3. Open a congress to see its details page: dates, city, venue and discipline.

Option B: custom platform

1. Open the visitor site (https://asset-voyages-demo.debanjan186.workers.dev/) and go to the congress catalogue.
2. Type a word in the search box, or narrow the list by discipline, country or month.
3. Open a congress to see its details page: dates, city, venue and discipline.

Task 3

Send a flight enquiry

Your visitors, on the public site

Option A: WordPress

1. On a congress details page, find « Demander un devis vol ».
2. Enter your contact details, departure city, travel dates and number of passengers.
3. Click « Envoyer ma demande ». You receive a reference number on screen.

Try leaving a field empty, or a return date before the outward date: the form says what to correct.

Option B: custom platform

1. On a congress details page, find « Demander un devis vol ».
2. Enter your contact details, departure city, travel dates and number of passengers.
3. Click « Envoyer ma demande ». You receive a reference number on screen.

The same checks apply: the form says what to correct before anything is sent.

Task 4

Receive, view, track and update enquiries

Your team, in the admin

Option A: WordPress

1. In the same tab as task 3, click « Espace équipe » and sign in as `equipe`. Open « Demandes »: your enquiry is at the top.
2. Open it and change its status, for example from « Nouvelle » to « Qualifiée ». Each change is kept in its history.
3. Click « Exporter en CSV » to download the list as a spreadsheet file. « Journal des notifications » shows the message your team would have received.

Option B: custom platform

1. Open the team console (https://asset-voyages-demo.debanjan186.workers.dev/console), sign in as `equipe` and open « Demandes ».
2. Open your enquiry from task 3 and change its status. Each change is kept in its history.
3. Click « Exporter en CSV » to download the list as a spreadsheet file. « Journal des notifications » shows the message your team would have received.

Task 5

Protect the GM&E codes

Your team and management

GM&E codes are the Air France-KLM Global Meetings & Events fare codes for a congress. Your team sees them hidden and asks for access, giving a reason. Direction approves for 24 hours, or refuses. Each time a code is shown, it is recorded. Visitors are not shown a code; when a code is approved and valid, they see only a line saying that a negotiated congress fare is available. In the project, this is checked by your acceptance test T05.

Option A: WordPress

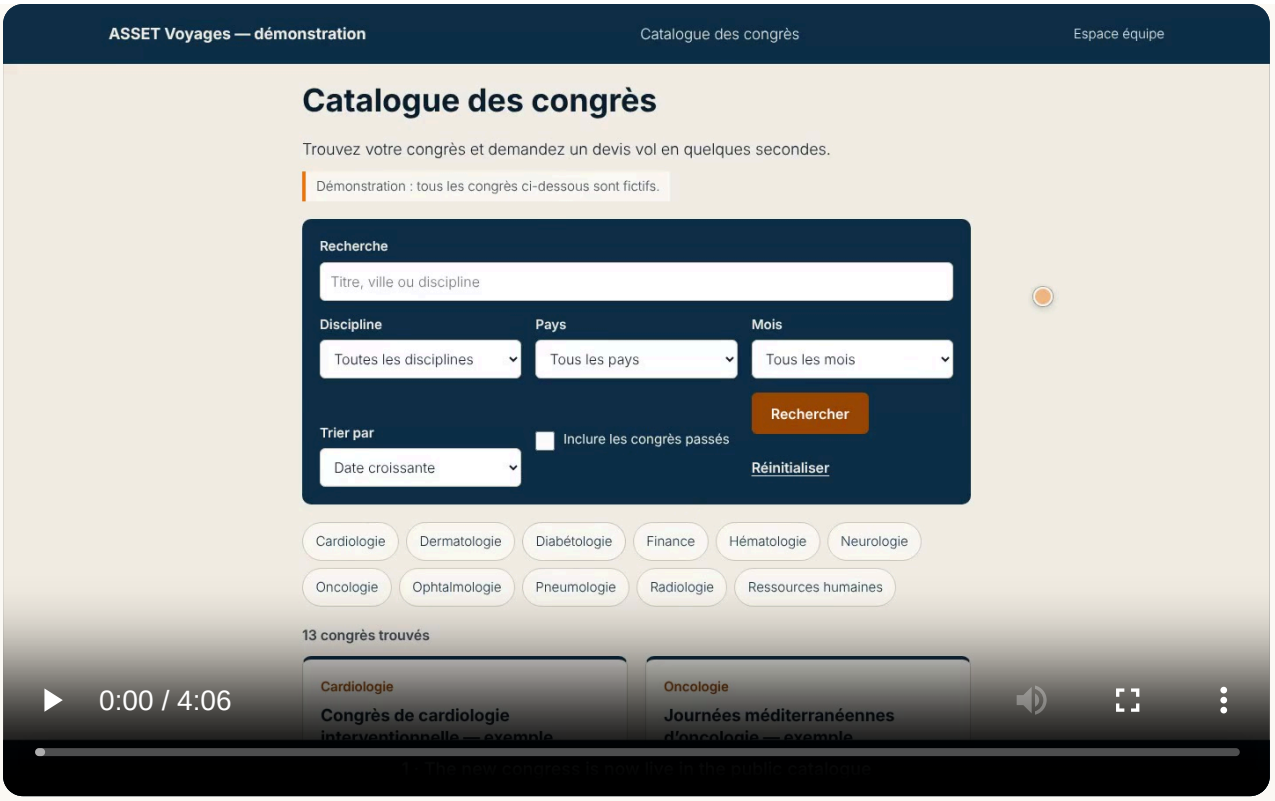

1. Signed in as `equipe`, open « Codes GM&E › Codes »: the codes are hidden. Click « Demander l'accès » and give a reason.
2. Sign out, sign in as `direction`, open « Codes GM&E › Demandes d'accès », and click « Approuver pour 24 h » or « Refuser ».
3. Sign in as `equipe` again and open « Codes GM&E › Codes ». The code stays hidden until you click « Afficher le code »: that click is needed. Each display is then listed in « Journal d'accès GM&E ».

Option B: custom platform

1. In the team console, sign in as `equipe` and open « Codes GM&E › Codes »: the codes are hidden. Click « Demander l'accès » and give a reason.
2. Sign out, sign in as `direction`, open « Codes GM&E › Demandes d'accès », and click « Approuver pour 24 h » or « Refuser ».
3. Sign in as `equipe` again and open « Codes GM&E › Codes ». The code stays hidden until you click « Afficher le code »: that click is needed. Each display is then listed in « Journal d'accès GM&E ».

Prefer to watch first?

Two short recordings walk through the same five tasks, one per option.

Option A, WordPress: the five tasks from start to finish (about 4 min).

Option B, our custom platform: the five tasks from start to finish (about 3 min 30).

3 What works today, and what we would build

“Works in the demo” means you can try it now. “Built during the project” means it is planned for the project and will be listed in the signed proposal, which alone defines what is included; where it helps, the demo shows a stand-in.

1. Create and edit congresses

Option A

Works in the demo

In the standard WordPress editor, with review before publishing.

Option B

Works in the demo

In the team console, with review before publishing.

2. Public catalogue with search, filters and details page

Option A

Works in the demo

Search, filters by discipline, country and month, a page per congress.

Option B

Works in the demo

Search, filters by discipline, country and month, a page per congress.

3. Flight enquiry form

Option A

Works in the demo

Every field is checked before sending; you get a reference.

Option B

Works in the demo

Every field is checked before sending; you get a reference.

4. Receive, view, track and update enquiries

Option A

Works in the demo

Statuses, history of changes, export to a spreadsheet (CSV).

Option B

Works in the demo

Statuses, history of changes, export to a spreadsheet (CSV).

5. GM&E codes protected

Option A

Works in the demo

Codes hidden, access asked with a reason, 24-hour approval, a record of every display.

Option B

Works in the demo

Codes hidden, access asked with a reason, 24-hour approval, a record of every display.

Email notifications

Option A

Built during the project

The demo shows a log of the messages instead of sending them.

Option B

Built during the project

The demo shows a log of the messages instead of sending them.

Importing about 300 congresses from a spreadsheet in the template we supply

Option A

Built during the project

With duplicate checks and a trial run first; checking the events themselves stays with your team.

Option B

Built during the project

With duplicate checks and a trial run first; checking the events themselves stays with your team.

English version

Option A

Option, quoted separately

A WordPress translation extension is added when the English version is ordered; the French site is built so that it can take one.

Option B

Option, quoted separately

The site is prepared for two languages from the start; the English version is switched on as a separate option.

Two-step login for staff

Option A

Built during the project

A password plus a second check, for every staff account.

Option B

Built during the project

Staff sign in with a code sent to their email.

Backups and restore	
Option A	**Built during the project** Regular backups, and a tested way to restore them.
Option B	**Built during the project** Regular backups, and a tested way to restore them.
Editing all the site's pages	
Option A	**Works in the demo** The standard WordPress page editor: sign in as `direction` and open « Pages ». The pages listed in the signed proposal are rebuilt during the project.
Option B	**Built during the project** A page editor added to the team console.

For both options, hosting in ASSET's name is set up during the project.

Works in the Option B demo **Suggestion only**

One more idea: a link for group trips

For a group going to a congress, someone has to collect each traveller's details and bring them together in one list.

What it does

1 **Your team sends one link** for the enquiry, in its reply to the client.

2 **Each traveller fills in their own details** on a phone: name as on the ID document, email, departure city and dates.

3 **Your team sees the list fill in**, with a « répondus / attendus » counter and a ready-to-use export, « Exporter pour cotation (CSV) ».

How to try it

1. Open enquiry DV-2026-0001 (https://asset-voyages-demo.debanjan186.workers.dev/console/demandes/1) and sign in as `equipe`, password `demo-asset`.
2. Choose the « Groupe » tab. Three fictional travellers have already answered.
3. Under « Lien de groupe », copy the link and open it in another tab. This is the traveller's page.
4. Send an answer, then go back to the « Groupe » tab: it is in the list.

The traveller's page does not show the other travellers, codes or fares.

Where it stands

- Working in Option B's demonstration, with fictional travellers, as an illustration.
- **Suggestion only. It is not included in the proposal to come, and the requirements and budget you communicated stay unchanged.**
- It exists in Option B's demo only. If ASSET wants it, it would be scoped and quoted separately for the option you choose, after the proposal, and built only on your written agreement.

Limits of the demo

- A traveller who changes phone cannot correct their entry directly: the change waits for your team to accept it. If the idea is taken up, an email confirmation step would be part of that separate scope.
- Anyone the link is forwarded to can answer. Revoking it stops that at once.
- Reminders by email and a status per traveller would belong to that separate scope as well.

4 How each one is built, in plain words

Option A: WordPress

- WordPress, the system your current site already runs on.
- A plugin written for ASSET (an add-on to WordPress), on a standard WordPress theme. Its code is handed over at completion, as set out in the proposal.
- Your team edits in the standard WordPress editor.
- Hosted with a managed WordPress host, agreed with you in the proposal, with the account in ASSET's name.
- Needs regular updates of WordPress and its plugins.

Option B: our custom platform

- In the project, the public pages are prepared in advance and served from Cloudflare's global network (the demo builds them on request).
- A small console for your team.
- The database is stored in the European Union, as the proposal will specify.
- Staff sign in with a code sent to their email.
- No WordPress plugins to update.

How to choose

Choose A if your team wants to keep the editor it already knows.

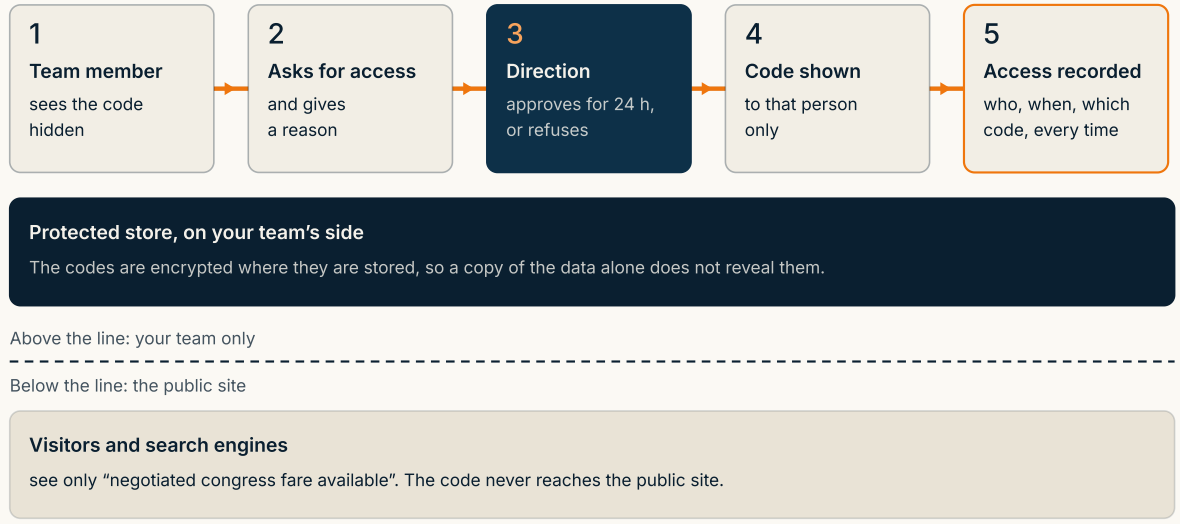

Choose B if the least upkeep matters most.

The written proposal sets out and prices each option against its own scope, so you can decide with both in front of you.

In both options: the GM&E codes are kept in a separate, encrypted table; the service accounts opened for the project are in ASSET's name, your existing accounts and data remain yours throughout, the source code and documentation are handed over in full at completion, as set out in the proposal, and your team can export pages, congresses and enquiries.

5 How the GM&E codes stay protected

The same path in both options. A team member sees a code only with Direction's approval, for 24 hours; Direction manages the codes and can revoke access at once.

Every request, decision and display is kept in a record that Direction can read.

6 Milestones

Indicative, about 13 to 14 weeks to launch in all; counted from your approval and from receipt of the content each stage needs; if content arrives later, the plan moves by the same time. The signed proposal fixes the dates for the option you choose.

Approval	Launch, about 13 to 14 weeks

Kickoff, access and audit

Weeks 1 to 2

An audit of your current site, and one workshop of up to 2 hours.

Design

Stage 2

Wireframes (page outlines), then desktop and mobile mock-ups, with two rounds of changes at each stage.

Development

Stage 3

Pages, the congress catalogue, enquiries, GM&E access, and the import of your congress list, with a trial run first.

Testing

Stage 4

On a private copy of the site, against your acceptance tests T01 to T15, then fixes.

Training

Stage 5

For your team, with a second session four weeks after launch.

Launch

About 13 to 14 weeks from approval

After your written acceptance, management's go-ahead and the acceptance payment, as set out in the proposal, with old addresses redirected to the new pages.

Stabilisation

Four weeks after launch

For four weeks after launch, as set out in the proposal, we run daily checks and correct, at no extra cost, anything in the agreed scope that fails its acceptance test (T01 to T15).

The launch date is agreed together.

7 A 20 to 30 minute demonstration

We walk you through both options and answer your questions. Pick a time below and your email opens with it filled in. All times are Paris time. If shortlisting comes later, we will propose a slot within 3 to 5 working days of your notice, subject to availability on both sides.

Thursday 12 November

10:00

Monday 16 November

14:30

Tuesday 17 November

10:00

Suggest another time

Nothing on this page is chargeable. Should further validation be needed after the demonstration, the scope, fee and delivery date of a sample would be agreed in writing first.
